The Diagnosis of Osteolymphoma: A Case Report and Review of the Literature 原發性非何傑金氏骨惡性淋巴腺癌的診斷：病例報告及文獻回顧

Spiers Alistair, Freeman Gregory

Abstract

Osteolymphoma, also known as primary non-Hodgkin's lymphoma of the bone, is an unusual disease which can be difficult to diagnose. This case study concerns a 51-year-old patient who presented with right leg pain initially diagnosed as osteomyelitis. Failure of treatment and further investigation revealed an unusual primary tumour. We review the sequence of events leading to the diagnosis of osteolymphoma and the literature relating to the diagnosis.

中文摘要

骨惡性淋巴腫瘤，也是被稱為原發性非何傑金氏骨惡性淋巴腺癌，是很難被診斷出的一種異常的疾病。這案例是一位 51 歲病患者起初期有右腿痛礎，經過初步治療失敗後而作進一步的檢查而診斷出為原發性骨惡性淋巴腫瘤。我們討論診斷出骨惡性淋巴腫瘤的時序及評論有關係的文獻。
