

Case Report

A Pseudoaneurysm of Median Artery—A Case Report

正中動脈假性動脈瘤:病例報告

Tong Sheung-Chi, Chan Wing-Leung, Chan Chi-Wai

Abstract

Median artery represents the persistence of part of the arterial axis of upper limb. We report a case of pseudoaneurysm formation from a palmar type median artery after a cut wrist injury. It is important to recognize this anatomical variant that can pose diagnostic difficulty in upper limb injury.

中文摘要

正中動脈是上肢動脈軸發育後的殘留部分。我們報告一個病例，病人在手腕割傷後從手掌類型的正中動脈形成一個假性動脈瘤。重要的是要認識到這種解剖變異，可造成上肢創傷的診斷困難。

Keywords: *median artery, pseudoaneurysm*
